

I really do not understand why anyone would feel the need to attack satellite radio, whether it be for its unedited content or instant traffic and weather. As a subscriber I am excited to see new ideas such as instant traffic and weather because regular AM/FM radio has become so lame due to the FCC and the federal government trying to parent all of the children in this country that it is nice to have somewhere to listen to what radio should be. Also whenever there is an Amber alert in one of the covered areas the information is broadcasted on these channels which reach all 50 states and Canada. Can regular radion do this?? NO. So please reject the NAB's petition 04-160 and keep satellite radio alive.
